

EXHIBIT A: SCOPE OF WORK

This Statement of work is entered into by and between ThermoVerse Inc. and an Independent Contractor (hereinafter referred to as “Contractor” or “The Contractor”).

1. Project Overview

Context: Following participation in the IC Taiwan Grand Challenge Showcase in June 2026, and a month-long business trip to Taipei spanning August 1 - 23 and August 30 - Sept 10, ThermoVerse Inc. will be participating in FUTEX 2026. The Expo will take place between Sept 17 - 19 at Taipei 101.

Fig. 1. ICTGC Award Ceremony at InnoVEX 2026.

Objectives: The company’s primary objective in Taiwan is as follows:

1. **Supply Chain Management** - relating to the development of customer Predictive Edge Devices/ Controllers to command the time release of stored thermal energy in LATCHES™ (Large-Area Transactive Cooling & Heat Energy Storage), a zero-footprint thermal battery that reduces peak HVAC (Heating, Ventilation & Air Conditioning) energy.
2. **Demand Management** - relating to Proof-of-Concept (POC) pilots in dense urban environments where traditional chemical batteries are either banned or restricted.

History:

1. **June 2026** - The company made its debut in Taiwan upon winning the 2026 ICTGC Winner (Sustainability), where they sought supply chain partnerships to transition and expand the production of their existing edge device from China to Taiwan.

2. **July 2026** - The company was invited to join the IAPS Accelerator by the National Yang Ming Chiao Tung University (Center of Industry Accelerator and Patent Strategy, National Chiao Tung University) to work with local Taiwanese partners to develop a custom predictive edge device to command the time release of stored thermal energy in LATCHES.
3. **August 2026** - In advancing Objective 1 (above) the company has partnered with LMT (Light Momentum Technology Corp.) through a local university-run accelerator known as IAPS. This collaboration entails developing a fully-integrated system-on-chip State-of-Charge Monitoring (SoCM) device to act as the central intelligence for *LATCHES™ - the world's most compact dispatchable thermal battery*.
4. **September 2026** - In advancing Objective 2 (above) the company has attended the Build for NextGen Expo, where it showcased LATCHES as a zero-footprint, urban-safe solution to help Taiwan and the Taiwan Intelligent Building Association (TIBA) reduce peak HVAC building load while complying with Net-Zero targets. Separately, the company is also exploring relationships with the Taipei Computer Association (TCA) to formalize a local subsidiary and to expand our footprint to Taipei.

ASSEMBLED LATCHES	EXPLODED VIEW W/ MCU	EXISTING EDGE DEVICE
		

Current Work: The Contractor will act as a local marketing representative for **ThermoVerse Inc.** in Taipei, Taiwan. This includes on-site representation at **FUTEX (September 17–19, 2026, at TWTC Hall 1)**, physical logistics for company demonstration materials, targeted academic matchmaking for US-Taiwan R&D grant co-proposals (e.g., MOEA A+, Taiwan SBIR, Taipei City R&D Subsidies), and a permanent bilingual optimization of the Company's website and CRM system.

2. Team Roles and Responsibilities

To ensure seamless execution during the event and project lifecycle, the following table

outlines the primary stakeholders and their respective responsibilities:

Name	Role / Title	Key Responsibilities
Shantonio Birch	President	Facilitate contractor hiring, oversee overarching logistics, and manage post-event information retrieval and strategic follow-up.
Mani Sainadh Venkata Sathi Reddy	Manufacturing Engineer & SCM	Coordinate and manage supplier relationships with industry partners generated from the expo.
Paixun Lin	Control Engineer	Act as the primary point of contact (paixun@thermoverse.com) to assist the Contractor in the initial daily setup and troubleshooting of the LATCHES demo unit (9:00 AM – 11:00 AM local time).
Contractor	Short-Term Contractor	Act as the on-site company representative and uphold ThermoVerse Inc.'s core values: FAITHE (Foundational Excellence, Agency, Intentional Collaboration, Transparency, Horizon, Relational Equity). Responsible for the pickup, transport, and drop-off of the demo unit, executing the 3-day expo representation, conducting targeted academic outreach, and completing the permanent bilingual website optimization.

3. Services and Deliverables

The Contractor agrees to perform the following tasks:

A. Logistics & Equipment Handling

- **Pickup:** Retrieve the demo container housing the LATCHES on or before **September 9, 2026, by 17:00 (Taiwan Local Time)**.
- **Transport:** Safely transport the demo container to the TWTC Hall 1 venue for use during the event.
- **Drop-off/Return:** Upon conclusion of the expo, securely pack and drop off the demo container housing the LATCHES to **Dr. Hou at the ITRI Software Park** on **September 21,**

2026. The Contractor must coordinate the specific drop-off details directly with **Sanna Wei** (sannawei@itri.org.tw).

B. Expo Representation (3 Days)

- **Event:** Attend and represent ThermoVerse Inc. at **FUTEX** located at TWTC Hall 1, Taipei.
- **Dates & Hours:** September 17–19, 2026. The official expo hours are **9:30 to 17:30**.
- **Daily Setup & Sync:** The Contractor is expected to arrive 30 minutes early (**at 9:00 AM**) each day for daily booth setup, with specific focus on setting up the LATCHES demo unit. The ThermoVerse Inc. US team will be available daily between **9:00 AM and 11:00 AM (Taiwan Local Time)** to facilitate setup troubleshooting and to transfer/review information captured during the summit. Please contact **Paixun Lin** (paixun@thermoverse.com) for all daily setup logistics and coordination.
- **Duties:** Manage the ThermoVerse Inc. booth/presence, utilize the LATCHES demo container to demonstrate the product to attendees, capture lead information, and represent the brand in a professional manner.

C. Targeted Academic Matchmaking & Outreach

The Contractor will execute a targeted outreach campaign to three specific academic partners to establish technical credibility and explore foundations for government R&D grant co-proposals (e.g., MOEA A+, Taiwan SBIR, Taipei City R&D Subsidies).

- **Pre-Event Outreach:** Send introductory emails (templates provided in Appendix A) to schedule booth visits.
- **On-Site Execution:** Visit the targeted booths (NYCU, NTUST, and NTU) utilizing the provided structured talking points to qualify partners for technical integration, materials modeling, and passive cooling applications.
- **Post-Event Reporting:** Document the responses and outcomes of these meetings and provide a written summary to the Company.

D. Website Optimization & CRM Integration

According to the agreed proposal, the Contractor will execute a permanent upgrade to the Company's digital presence with a target delivery of **September 15, 2026**.

- **Bilingual Delivery:** Create a fully bilingual website across Traditional Chinese and English.
- **Core Pages:** Develop and optimize 5 main pages (10 localized pages total): Home, Technology, Use Cases, About Us, and Contact Us.
- **Content Architecture & Value Proposition:**
 - *Home:* Messaging must lead with the unique value proposition of LATCHES. The core focus must emphasize urban-safe energy storage tied directly to HVAC systems—the largest energy-consuming equipment in buildings—to help clients reduce energy consumption and meet ESG targets. The page must explicitly highlight a **Zero-footprint, Urban-Safe Installation** and address the critical need for alternatives to chemical Battery Energy Storage Systems (BESS) in dense urban areas due to strict fire codes.

- *Technology:* Clearly explain LATCHES operation. Highlight the **State-of-Charge Monitor & Controller** (a predictive edge device that actively senses and controls device logic) and **Tunable Thermal Storage**. Emphasize the **Unparalleled Thermal Comfort** achieved by commanding the time release of stored thermal energy (maintaining setpoints for 4 hours longer before the HVAC switches back on) alongside its **Seamless Integration (BacNET-native)** for peak load management.
- *Use Cases:* Recruit Proof of Concept (POC) site partners across commercial, industrial, and multifamily applications.
- *About Us:* Include company positioning, the founding story, and introduce the FACES workforce program.
- **CRM & Lead Management:** Build a Contact Us form that requires name, email, inquiry type, and message. The form must integrate with a CRM to record every inquiry, identify the source page, and allow the team to track follow-ups. Inquiry types must allow users to select between POC site partnership, technology inquiry, FACES interest, or other.

PAYMENT SCHEDULE & TERMS

1. Compensation Structure

For the satisfactory completion of the Services, the Company will pay the Contractor as follows:

- **Expo Day Rate:** \$175 USD per day for 3 days of expo attendance. (Total: \$525 USD).
- **Website Updates & CRM Setup:** A flat project fee of \$675 USD for the completion of the bilingual website optimization, CRM setup, and the execution of the email outreach campaign.
- **Total Base Compensation:** \$1,200 USD.

2. Expense Reimbursement

The Company will reimburse the Contractor for reasonable, pre-approved, out-of-pocket expenses directly related to the execution of this SOW. This specifically includes:

- Taxis, courier fees, or transit costs associated with the pickup and drop-off of the demo container housing the LATCHES.
- *Expense Policy:* All expenses must be submitted with valid digital receipts on the Contractor's final invoice.

3. Invoicing and Payment Schedule

- **Invoice Date:** The Contractor will submit one final invoice upon the completion of the expo, the drop-off of the LATCHES demo container, and the final website deployment.
- **Payment Terms:** The Company will pay the approved invoice within 30 days of receipt via **check or international wire transfer**.

APPENDIX A: OUTREACH EMAIL TEMPLATES

The Contractor shall use the following templates to initiate contact with the targeted academic partners prior to the FUTEX event, or adapt them for immediate post-event follow-up if prior contact is not established.

Email 1: To Dr. Sheng-Yu Peng (NYCU)

- **To:** speng@nycu.edu.tw
- **CC:** birch@thermoverse.com, mani@thermoverse.com
- **Subject:** FUTEX 2026: ThermoVerse Inc. & NYCU SiP/Analog Edge Integration (US-Taiwan R&D Grants)
- **Body:**

Dear Dr. Peng,

My team from ThermoVerse Inc. will be attending FUTEX next week, and we are highly interested in your embedded analog flash RNN architecture.

ThermoVerse Inc. is currently developing edge controllers for thermal energy storage latches. To reduce the latency and power consumption of microvolt-level Seebeck measurement, we are transitioning to a System-in-Package (SiP) architecture and exploring event-driven analog front ends to bypass traditional ADCs.

We are currently evaluating academic partners for an upcoming US-Taiwan R&D grant co-proposal (e.g., MOEA A+, Taiwan SBIR, or Taipei City grants). We would love to stop by your booth to discuss whether your IP can be leveraged as a Known Good Die (KGD) for our SiP roadmap. Please let us know if there is a preferred day or time to connect at TWTC.

Best regards,

[Contractor Name / ThermoVerse Inc. Team]

Email 2: To Dr. Ping-Chun Tsai (NTUST)

- **To:** pctsai@mail.ntust.edu.tw
- **CC:** birch@thermoverse.com, mani@thermoverse.com
- **Subject:** FUTEX 2026: ThermoVerse Inc. & NTUST Predictive Materials Modeling (US-Taiwan R&D Grants)
- **Body:**

Dear Dr. Tsai,

Our team at ThermoVerse Inc. is looking forward to seeing your Autonomous Materials Intelligence Platform at FUTEX next week.

We design advanced thermal energy storage latches and controllers. A critical bottleneck in our R&D is the physical trial-and-error testing of Phase Change Materials (PCMs) and the thermomechanical stress on our semiconductor (SiP) substrates during rapid thermal cycling. Your computational approach to predicting interface behavior and fatigue aligns

perfectly with our roadmap to lower our upfront NRE and embodied carbon. We are currently structuring a US-Taiwan R&D grant proposal (e.g., MOEA A+, Taiwan SBIR) and are looking for strong academic R&D partners. We plan to visit your booth to discuss if your multiscale models can be applied to solid-state thermal interface materials. Let us know when you might be available for a brief conversation!

Best regards,

[Contractor Name / ThermoVerse Inc. Team]

Email 3: To Dr. Ya-Yu Chiang (NTU)

- **To:** yayuc@ntu.edu.tw
- **CC:** birch@thermoverse.com, mani@thermoverse.com
- **Subject:** FUTEX 2026: ThermoVerse Inc. & NTU Passive Helical Cooling Applications (US-Taiwan R&D Grants)
- **Body:**

Dear Dr. Chiang,

The ThermoVerse Inc. team will be walking the FUTEX floor next week, and your passive helical vapor-liquid separation technology caught our immediate attention.

We build thermal battery latches and advanced controllers for smart buildings and data centers. Managing extreme heat fluxes from Thermoelectric Coolers (TECs) without adding parasitic energy draw (like fans or pumps) is central to our hardware strategy. Achieving 312 W/cm^2 entirely passively is a remarkable breakthrough.

We would love to visit your booth to discuss the form-factor scalability of your design, and whether it can be adapted to localized TEC heat sinks. Furthermore, we are actively structuring a US-Taiwan R&D grant proposal (e.g., MOEA A+, Taiwan SBIR, Taipei City R&D Subsidies) and are evaluating academic partnerships.

Please let us know what day works best for a brief introduction at your booth.

Best regards,

[Contractor Name / ThermoVerse Inc. Team]
